maps, patterns, S37
prostate. See prostate.
registries, state, S1
research, prostate, priorities for, Table, S12
census tracts, clusters in, S60
cigarettes and prostate cancer, S9
cluster detection tests, S42
clustering tests, global, S39
color blindness in map readers, S27
compressed mortality file (CMF), S52
Cuzick-Edwards' k-NN, S40

D

dietary influences, prostate cancer, S9

E

environmental data, linking geocoded cancer data, S19
environment–geography link, S8
epidemiology, location-specific, S10
exploratory spatial data analysis (ESDA), S3

F

Federal Information Processing Standards (FIPS), S16

G
geocodes/geocoding
  and demographic data, S18
  cancer, S18
  defined, S3
  errors, effect of, S17, S20
  in cancer research, S16
  practices in registries, recommendations for, S20
  purpose of, Table, S22
  quality of, S18
  quality, questions, Table, S21
  recommendations, Table, S22
geographic theory and prostate cancer research, S11
geography–environment link, S8
GIS websites, informational, Table, S2
GIS, history, S7
global clustering tests, S39

H
Health Insurance Portability and Accountability Act (HIPAA), S19
health services data, linking geocoded cancer data, S19
hierarchical generalized linear modeling (HGLM), S88
Hoover index, Figure, S51

I
interpolated matching methods, S17

J
Jenks method, S28

L
Louisiana Tumor Registry, S88

M
map(s)/mapping
  cancer, patterns, S37
  choropleth, S26
  color symbols, S26
  data classing, S28
  file exporting, S34
  finishing, S32
  methods, S26
  multiple variables, S31
  overlay and special classes, S32
  principles for GIS data, S25
  projection, S35
  series, S31
  wording, S33
Maryland Cancer Registry, S77
Moran's I, S40,
mortality, prostate cancer, S51, S101

N
New Jersey, clusters of prostate cancer, S60
North American Association of Central Cancer Registries (NAACCR), S20
Northern Plains states, prostate cancer, 101

O
obesity and prostate cancer, S9
Oden's Ipop, S41

P
parcel matching methods, S17
pesticide
  application, S111
  exposure assessment, S109
physical inactivity and prostate cancer, S9
privacy and confidentiality issues, S19
prostate cancer
  and African Americans, S11
  and GIS, S1
  and pesticide exposure, S109
  change in spatial pattern, S50
  development and progression, S8
  epidemiology, S8
  hypothetical model, Figure, S13
  incidence, geographic variation, S51
  incidence, S60
  mortality rates, S101
    geographic variation, S51
  research and geographic theory, S11
  risk, S7, S8

R
racial disparities, prostate cancer incidence, S67
registries
  geocoding practices, recommendations for, S20
  privacy and confidentiality issues, S20
research, prostate cancer and geographic theory, S11

S
smoothing, defined, S4
software, S5
  spatial scan, S61
spatial
  analysis, cancer incidence, S67
  data analysis, challenges, S4
  modeling, S3
  pattern, prostate cancer, change in, S50
  scan software, S61
  scan statistic, S42, S88
  statistics, commentary, S3
standardization, defined, S4
Surveillance, Epidemiology, and End Results (SEER) program, S50, S68
Swartz's entropy test, S41
symbols, proportional, S29

T
Tango's maximized excess events test (MEET), S41
Topographically Integrated Geographic Encoding and Referencing (TIGER), S17
Turnbull's cluster evaluation permutation procedure (CEPP), S43

V
variables, multiple, mapping, S31
Virginia Cancer Registry, S67
visualization, S3

W
websites, GIS, informational, S2
Western cultures and prostate cancer, S13
Whittemore's test, S42

Z
ZIP code tabulation areas (ZCTAs), S18
